**The methodology of the study.** The methods of development of indicators are investigational in the article, determinations of the crisis state of industry with the use of scientific methodologies of comparative analysis and analogues, as well as the special methods of construction of statistical tables and charts.

**Results.** The dynamics of indexes testifying to the crisis in field of fish industry is evaluated. It is set that the fish management of Ukraine is characterized by a considerable unemployment rate, in several times exceeding middle indexes on all national economy. A wage level in industry is very subzero as compared to middle indexes.

The subject indicator of determination of crisis in fish industry is connected with the quantity of performers of entrepreneurial activities in this sphere. The negative dynamics of this index testifies to the presence of crisis.

**Novelty.** The basic indicators for the crisis in the industry were proposed.

**The practical significance.** The necessity of decisions making for the withdrawal of Fisheries of Ukraine from a state of crisis was proved.
