Research Methodology. Theoretical and methodological basis for research is a dialectical method of cognition and systemic approach to the study of the economic phenomena and processes. The objectives set in the article were developed by the following methods: monographic (within research of economic security threats from position of danger for the state), economical and statistical (during grouping of economic security threats with the aim of determination of public policy main tasks in the period of market reforms) and abstractly logical (at formation of theoretical generalizations and conclusions). In addition the specific methods of grouping and ranking were used for authentication of the most impressionable threats.

Results. In the process of research we received two groups of threats ranked according to assets impressionability and loss size related to their destructive consequences. The main tasks of public policy in relation to prevention of especially dangerous for national security threats and negative factors that generate them in economic, social, military, informative and ecological spheres are determined.

Novelty. The methodical approach to classification and ranking of threats and negative factors of danger on the criteria of assets impressionability and losses size through their destructive influence.

Practical Significance. The primary ways of prevention of destructive influence of the most impressionable threats to state economic security are developed.
