Research Methodology: Complex approach of the systems is used for research of the state of food security in Ukraine by the indicators of food security and their maximum values. The features of quantitative analysis and high-quality estimation of food security are found out. Economical and statistical methods are appraising the actual level of the system of food security of Ukraine.

Results: The modern method of estimation of food security is analyzed by indicators. The state of food security of Ukraine is evaluated. The role of indexes of socio-economic character, which determine the level and quality of life of population and which should be taken into account at determination of food strength security, is revealed. Offers in relation to the improvement of indicators of food security for state economic security provision are developed.

Novelty: The contradictions of existing methods of indicators calculation of food security and their maximum criteria are investigated. On that basis the systematization of indexes of food security according to the groups is developed that enables to determine level of food security of Ukraine more precisely and carry out the proper public policy in this sphere.

The practical significance: On the basis of the improved method of calculation of food security indicators of the state and their maximum values, practical recommendations, which are a scientific base for forming of strategy of long-term development of the food program of the state, are developed. The use of suggestions of public organs and scientific establishments of economic and agrarian type will contribute to increasing of food and economic security of the country.
