**Research Methodology:** By means of the systematic approach the contemporary state of Ukraine's export control for transfers of dual-use goods and the peculiarities of the system functioning are revealed. Using economic and statistical methods the probable losses of the state with illegal transfer channels of high-tech and dual-use goods are estimated.

**Results:** The current state of Ukraine's export control for transfers of dual-use goods in the economic security of state is analyzed. Security objects in international transfers of dual-use goods and features of international transfers of military goods admitted to civilian use are defined. The classification of objects of security risks and factors of security threats in export control of dual-use goods is offered.

**Novelty:** The objective preconditions of unauthorized diversion threats of sensitive technologies are revealed. Improvement of methodological approaches to informational block by classification and evaluation of the development of factor influence on the effectiveness of export controls for international transfers of dual-use goods are proposed.

**The practical significance:** The classification of objects of security risks and factors of security threats in export control of dual-use goods is a scientific basis for developing methods in improving the export control, customs control and forming projections and strategies of military technical and military economic security of the state.
