Research methodology. By the methods of comparative analysis and deductive method the different conceptions were analyzed and considered in relation to the concept of shadow economy, shadow activity, unshadowing of economy. The dynamics and sequence of development of this question study both by foreign and domestic scientists were investigated.

Results. The different conceptions were comprehensively analysed and considered in relation to the concept of shadow economy, shadow activity, unshadowing of economy. This question studies both by foreign and domestic scientists were analyzed.

Novelty lies in the argued positions in relation to assertion, that “using a term-concept of fight against a shadow economy; it is necessary foremost to take into account that regardless of reasons of origin of shadow economic activity, employment is the main in it, and quite often and the only source of receiving of facilities for existence at the far of citizens of Ukraine. Therefore term “fight” it is necessary to use only in understanding of “bringing in to the public inspection and participating in creation of state resources”, but not in understanding of “elimination” or even “stopping of activity”.

Practical significance. On the basis of the improved methodology of research it becomes firmly established that overcoming of the shadow economy in the separate state is impossible, as it has transnational character through the association of criminal clans. The increase of inflation of rising in the price of power mediums is one of reasons of shadow capitals growth.
