**Research Methodology.** By means of systemic approach the main directions of state measures realization on limitation of shadow economic activities are determined. The model of benefit estimation from shadow economy limitation is offered.

**Results.** The main directions of state measures realization in the sphere of shadow economy activities limitation are determined. Extremum of these measures, allowing construction of the conditions system, at which realization of government control measures becomes effective, is revealed. The general rule of increase of efficiency measures on limitation of shadow sector includes provision of exceeding received benefits from such limitation and public expenses on the institutional provision of these measures.

**Novelty.** The factor model of benefit on shadow economy limitation is offered. Relative positive effect from shadow relations regulation is determined as the regulation effect and the negative effect of state regulation – as regulatory charges. The regulatory effect is in direct dependence, and the regulatory charges – in reverse dependence from the level of state interference into economy.

**Practical Significance.** Measures on limitation of shadow economic activity from reduction of scales of such activity make a positive result as receipt to the budget including, and simultaneously foresee the increase of charges, related to intervention from the state into the activity of business entities.
