The research methodology. In this articles such methods were used as: the method of grouping in identifying approaches to the assessment of the level of economic security, the methods of analysis and synthesis in determining the required steps in proposed methods of evaluation of economic security and the method of analytic hierarchy of determination the weight of the components of economic security within the integral index.

The results. The most common views on the issue of economic security assessment were analyzed, the grouping of the techniques according to given content was conducted, their advantages, disadvantages, limitations and peculiarities in use were defined. A two-tier method of evaluation of economic security that allows the distribution on four zones was proposed.

Innovative Aspects. The conditions of the formation of the modern methods of evaluation of economic security were revealed. The two stages of the procedure was distinguished, based on them the method of evaluation of economic security was proposed. The proposed method involves a combination of two levels of calculation: the current level of economic security in terms of profitability and the level of forward-looking cost-based security index of a list of components.

The practical significance. The method of evaluation of economic security allows you to create accurate conclusions about the condition and forecast for the development of enterprise by getting it to a certain zone of economic security, both in terms of current profitability, and from a long-term perspective.
