**The methodology of the study.** By means of a systematic approach science and technology parks are studied, that combine scientific research, technological and manufacturing companies, provide a quick introduction of the results of research and inventions in industry and business.

**Results.** Technological parks and technopolices are analyzed, that are a kind of catalysts and should contribute to the formation of high-tech industrial sector and generate scientific and technical core of the economy.

**Novelty.** It is proved that the technopark activities stimulate the development of certain industries, create prerequisite for reducing the cost of production and the development of private enterprises and companies, thereby increase their competitiveness in the global market.

**The practical significance.** Based on an improved methodology of the study of technology parks, practical recommendations are developed and they appear to be the scientific basis for making predictions, strategies and programs of long-term development of innovational activity that build government agencies and academic institutions.
