**Research Methodology.** Using a systemic approach, the main stages of effective state support for the reproduction of the resource potential in the agricultural sector of economy were formed, and measures for the improvement of its implementation were proposed.

**Results.** The basic steps of effective state support for the reproduction of the resource potential in the agricultural sector of economy were analyzed. It was determined that implementation of the above mentioned steps is carried out by the determining of people, responsible for the development of the agro-sphere entities (managers and employees of state and private entities of all levels). Attention is focused on a valuable role of the above mentioned subjects in the development and implementation of a comprehensive national program of the development of the agricultural sector of economy, its implementation monitoring and evaluation of the relevant results.

**Novelty.** The stages of the formation of a national program for the development of agro-sphere at the macro- and micro-levels in the context of laws transformation and directions of the state influence on this category (change of priorities and components of the rural areas development) was found, proved and analyzed.

**The practical significance.** The received research results are the basis for the study and practical solution of the problem of reproduction of the resource potential in the agricultural sector as a whole. It is applied, above all, to effective and comprehensive reproduction of land, logistical, financial and other resources in this sphere. This approach will provide a complete reproduction of agro-sphere capital in general.
