Research methodology. By the systemic analysis the state of financing of the system of higher education was investigated. The tendencies were found out and the sources of the financing of the economic activity entities of this industry were defined. By the usage of economic and statistical methods the current state and problems of investment in educational field with determination of practical recommendations in relation to the removal of negative disbalances at the market of educational services in Ukraine were evaluated.

Results. The types of financing of the system of higher education in a comparative analysis with experience of other countries were analysed. The state of provision and features of realization of the state investment in educational field was evaluated. The mechanisms of optimization of the mentioned process taking into account the national features were offered.

Novelty. Objective preconditions of the formation of the state financing system of the educational field with more effective bringing in of facilities of private entities were exposed. The methodological approaches to the analysis of investment processes in Ukraine in the field of higher education with the use of experience of European organizations in relation to the conduction of statistical, mathematical and economic analysis were offered.

Practical significance. By the use of scientific and methodical approach the algorithm of the study of investment streams in the system of higher education from the side of different entities of economic, business and public activity was developed. The algorithm can be used for the solving of questions of forecasting and estimation of the condition of the state financing of the field of higher education of Ukraine.
