Research Methodology: Using a systematic approach the state of the components of economic security and their impact on the economic security of the state were investigated.

Results: The methodology of the evaluation of the level of the state economic security (the official monitoring of the economic security of Ukraine, which is being implemented by the Ministry of Economic Development and Trade of Ukraine, research A.I. Sukhorukov and Y.M. Harazashvili, and improving of the system of economic security, proposed by V.H. Potapenko and D.S. Biriukov) and the values of the weighting coefficients of spheres of economic security were analyzed. The role of the environmental component of state economic security was considered.

Novelty: The influence of economic security spheres on the state economic security in different techniques was considered. The importance of economic security spheres in existing techniques was analyzed.

The practical significance: The conflict between the values of the weight coefficients of the existing methods of economic security valuation was considered. It was defined, that influence of ecological constituents of economic security will promote the level of state economic security.
