**Research Methodology:** The existing approaches to the definition of economic security are researched. For classifying threats of tourist enterprises the logical method and system analysis are used, and to systemize business risks of tourist enterprises methods of induction and deduction are implemented.

**Results:** Existing approaches to the definition of enterprise economic security are analyzed, tourist enterprises threats are classified, business risks of tourist enterprises are systematized. The ways of risk management are explored in order to limit the costs of tourist enterprises and ensure their economic security.

**Novelty:** Author's definition of the concept of "economic security" as a set of operating conditions, controlled by enterprise, in which the business entity is able to protect against internal and external threats, conservation and reproduction of their financial and economic, technological, human, scientific and technological capabilities is formulated. The analysis of approaches to the classification of economic security threats the new classification feature: due to the threats is offered.

**The practical significance:** The study results will enable tourist enterprises to better identify risks, to predict their impact on tourism enterprise and to avoid or significantly reduce the negative effects of the latter.
