Research Methodology: Activation of integration processes needs more detail analysis of modern tendencies of international and national policy in the field of regulation of agricultural TNC activity. That is why the main task of our research is exposing of the priority directions of government policy which will allow to increase efficiency of the regions' economy transnationalization processes.

Results: Modern structure of agricultural economics' sector is deformed. There is the prevail part of the production with a little and middle deep of produce processing industry in the national economics that provides the lowest positions in the world's economics. Thus, the important direction of structural transformation of agricultural economics is changing of proportions between raw materials commodities, suppliers' ones and services sphere.

Novelty: The main directions of government policy formation in the context of regulation of agricultural industry transnationalization processes are formed.

The practical significance: Ordered methods allow increasing of the level of national agricultural competitiveness and activating of the dynamic of inflow PFI.
