Research Methodology. It was investigated the relationship between the degree of clustering of the economy and the level of state economic security. To determine the threats and destructive consequences of globalization, the method of dialectical materialism, the method of system analysis were used. Also to predict the future prospects of clusters in Ukraine - logical method, comparative analysis were used too.

Results. Existing approaches were analyzed to definitions of economic cluster threats to the economic security of Ukraine, the main risks to economic security in the context of globalization were also determined. The role of clusters in combating and reducing the destructive effects of the crisis and the hegemony of states with developed economies were investigated.

Novelty. Regulation on economy clustering as a factor of economic security of the state was proved. The relationships between the degree of clustering and level of economic security were revealed. In particular, the effective operation of clusters and the support of state regulatory activities suggests the improvement of living standards, the widespread use of innovations, scientific and technical potential, creating conditions for economic growth and is an effective preventive mechanism in terms of threats and risks.

The practical significance. Results of the study will form a strategy for the formation and development of clusters; government agencies can more effectively implement cluster policies that will reduce risks and threats to economic security of the state.
