Research Methodology. The condition of Ukrainian logistic efficiency was investigated, using a systematic approach, and the factors of logistic influence and quality of logistic services in Ukraine were revealed. The key performances of Ukrainian logistics in comparison with other countries were evaluated using the economic and statistical methods.

Results. The modern logistics efficiency level of the country was investigated, the Ukrainian place in the international rankings of logistic performance was identified, the factors of influence on logistic performance and quality of logistics services in Ukraine were revealed, the key performances of Ukrainian logistic in comparison with other countries were evaluated.

Novelty. The approaches to the analysis of the development of logistics and the possibility of measuring its efficiency in each country in the current context of globalization were offered. The elements and factors which influence the efficiency of the implementation of logistics activities were considered on the example of Logistics Performance Index (LPI).

The practical significance. The practical recommendations which may serve as a scientific base on development programs of effective logistics practices were offered. This will work towards the development of logistics in Ukraine, which has a significant impact on the economic potential of the country and reflects the competitiveness of our country in the world.
