Research methodology. Using a systematic approach the process of economic security of educational institutions provision in modern conditions was investigated; the factors that negatively influence on the economic security of the institution were considered.

Results. The state of economic security of educational institutions for today was analyzed. The basic principles of forming the economic security of educational institutions, taking into account to the specificity of their activity in modern conditions, were considered.

Novelty. The functioning of principles of economic security of educational institutions was considered. We suggest that they should work closely with the national economic security at the legal level. It was proved that the agreed functions, methods, principles and mechanisms of the economic security of educational institutions, represent the essence of conceptual approach. It was determined that the result of well-formed and well-organized economic security of educational institutions should be: the stability of their operation, cyclical, innovation, and long-term effectiveness of their activities.

The practical significance. The introduction of modern methods and technologies will contribute to strengthening of the economic and educational institutions and will solve the following issues: adequately respond to the imbalance of economic stability, oppose timely and effective reorganization to threats, as well as the structure and functioning of the education system; quickly identify causes and conditions, which promote the financial and material damage, disruption of normal functioning and development; etc.
