**Research methodology:** In order to prevent and eliminate threats to the economic security of economic entities, the article suggests applying the method of situational analysis to support management decisions.

**Results:** The relevant methods of management of economic decisions which are based on the method of situational simulations were substantiated. The method was developed in establishing the etalon grade situations and the allowable area of changing parameters was determined. Also the method of attributing the current situation to the etalon classes was suggested.

**Novelty:** In article as a tolerance function it was encouraged to use the Euclidean distance, to classify the current situation to the reference class. According to the reference values of the indicators three standard class security situations were identified: green – no danger, yellow – valid value, and red – threat to economic security is present.

**The practical significance:** The proposed methodology is applying for managerial decision making will improve the level of management of economic security both in the short term and in the long term.
